

Proposal Reference

A practical structure for turning a competition brief, user evidence, and a prototype into a clear submission narrative.

Prepared by

HIHANG HOENG

Use case

UI/UX design competitions and product innovation challenges

Format

Replace the example prompts with validated project evidence

This document is a reference, not a finished competition submission. Adapt the structure to the organizer's rules, judging rubric, page limit, and required evidence.

01 / EXECUTIVE SUMMARY

Project Overview

Introduce the product, the user problem, and the expected value in one concise paragraph. A judge should understand why the project matters before reading the feature list.

02 / BACKGROUND

Problem Framing

- Describe the observed context and the people affected.
- Include credible evidence from interviews, surveys, desk research, or field observation.
- Separate symptoms from the root problem.
- Connect the problem to the competition theme and judging criteria.

03 / OBJECTIVES

Design Objectives

- Validate the primary user need.
- Create an understandable end-to-end experience.
- Demonstrate usability, feasibility, and measurable value.
- Produce a prototype and narrative suitable for judging.

04 / TARGET USERS

Primary Audiences

Define the main user segment, their context, motivations, barriers, and current behavior. Keep secondary users separate so the core flow remains focused.

05 / PROPOSED SOLUTION

Solution Direction

Explain the product concept, why it addresses the root problem, and how the experience differs from current alternatives. Avoid listing features before the value proposition is clear.

06 / CORE FEATURES

Prioritized Experience

- Feature 1 - primary task and its user value.
- Feature 2 - supporting workflow or decision.
- Feature 3 - feedback, trust, or transparency mechanism.
- Feature 4 - accessibility, recovery, or edge-case support.

07 / UX STRATEGY

Design Principles

- Evidence before assumptions: connect decisions to research.
- Clear before clever: prioritize comprehension and task completion.
- Lightweight by default: avoid unnecessary visual and technical burden.
- Accessible states: provide readable hierarchy, feedback, and recovery paths.

08 / VALIDATION

Research and Testing Plan

- State the research question and participant criteria.
- Document the prototype scenario and success indicators.
- Summarize findings, design changes, and remaining risks.

09 / DELIVERY PLAN

Competition Timeline

Week 1: brief analysis and rubric mapping

Week 2: research and validation

Week 3: information architecture and user flow

Week 4: wireframe and visual system

Week 5: prototype and usability review

Week 6: proposal, pitch deck, and final submission

10 / SUBMISSION CHECKLIST

Final Review

- Proposal follows the organizer's format and page limit.
- Claims are supported by evidence and sources.
- Prototype link is accessible without requesting permission.
- All flows include loading, empty, success, and error states.
- Team roles, references, and appendices are complete.
